1984

NEW YORK STATE
COLLEGE OF VETERINARY
MEDICINE

Countless men and women have assisted us with our education through the past four years. We can think of parents, husbands, wives, professors, clinicians, business personnel and technicians just to name a few. In addition to the people, there have been many animals who have involuntarily given their comfort and their lives to further our understanding of biological processes and disease. In this environment where such an enormous quantity of precious time, patience, money and life itself has been allotted for our benefit, it is difficult to select any person or persons to especially cite and thank for their contributions.

It is our belief, however, that when we consider the experiences of the past four years, there are two people that appear readily in our minds and conjure up sincere feelings of gratitude and appreciation not only for their efforts on our behalf, but also for their easygoing, good-humored, intelligent, and confident attitudes. It is this contagious spirit of gentle amusement that has helped color our task of understanding science with a more appealing hue.

We appreciate it in Dr. Hillman, who saw to it that our instruction in Theriogenology was complete and thorough even though his time spent as an ambulatory clinician had to be sacrificed for our sake. It is infrequent that someone who has a favorite occupation taken away and is assigned to a classroom ends up delivering excellent performances in lecture complete with jokes and stories of the road — and convinces everyone that he enjoys it. We appreciate this spirit also in Dr. Hornbuckle, the incurable matchmaker and sweets-grabber who has seen to it that time is always made for increasing our understanding through small animal palpation skills and serious one-on-one scientific discussion. Dr. Hornbuckle's subtle sense of humor perfuses his personality and it seems that when a comfortable atmosphere is maintained in the presence of learning, the amount of knowledge gained comes faster and is retained longer.

It is to these two men, Dr. Robert Hillman and Dr. William Hornbuckle, in appreciation of their efforts and especially for the pleasant, encouraging atmosphere and inquisitive spirits they instill, that we, the Class of 1984, dedicate our yearbook.

Objectively, that is, seen from the outside and without taking into account that man is a beginning and a beginner, the chances that tomorrow will be like yesterday are always overwhelming. Not quite so overwhelming to be sure but very nearly so as the chances that no earth would ever arise out of cosmic occurrences, that no life would develop out of inorganic processes and that no man would emerge out of the evolution of animal life. The decisive difference between the "infinite improbabilities" on which the reality of our earthly life rests and the miraculous character inherent in those events which establish historical reality is that, in the realm of human affairs, we know the author of the "miracles." It is men who perform them — men who because they have received the twofold gift of freedom and action can establish a reality of their own.

The Road goes ever on and on,
Down from the door where it began,
Now far ahead the Road has gone
And I must follow if I can
Pursuing it with weary feet
Until it joins some larger way,
Where many paths and errands meet,
And whither then?
The road goes ever on and on,
And whither then?
I cannot say.

Afoot and light-hearted I take to the open road,
 Healthy, free, the world before me,
 The long brown path before me leading
 wherever I choose.
 Henceforth I ask not good-fortune. I myself am
 good-fortune.
 Henceforth I whimper no more, postpone nor
 more, need nothing,
 Done with indoor complaints, libraries,
 querulous criticisms,
 Strong and content I travel the open road
 The earth, that is sufficient,
 I do not want the constellations any nearer,
 I know they are very well where they are,
 I know they suffice for those who belong to
 them . . .

The parvo claim game.

You don't control parvo with *laboratory claims* for high serum neutralization antibody titer levels.

Parvo is too resistant for that; too highly concentrated in fecal matter, too easily transmitted.

To win against parvo you need a vaccine that protects patients against virulent disease challenge.

The vaccine? 'Vanguard'. Proof?

Instead of resting on titer claims, Norden went on to put 'Vanguard' CPV through "real world" testing — with a challenge virus so infective that 100% of controls developed typical signs of CPV enteritis. Meanwhile, despite the severity of challenge, 100% of vaccinates remained clinically normal. All attempts at virus

recovery from vaccinates also were uniformly negative — further evidence of the high level protection provided.*

Offer your clients the proven protection of 'Vanguard' — the first federally-licensed combination vaccine with a modified live, canine origin parvovirus antigen. Available from your Norden branch to meet your practice situation: single antigen or in combinations with distemper, CAV-2, parainfluenza and leptospira.

Editor's Note:

To watch a project such as this one begin as a contract and end as a sentimental memoir has been an exciting experience. Never did I anticipate the time and effort it would require, nor did I expect the faithful, enthusiastic and creative support I would receive for the duration of the job. The members of the crew who put together this yearbook have sacrificed valuable time and payed exacting attention to detail in order to ensure that the entire class has been at once represented, recalled and benignly ridiculed. We hope you are as happy with our effort as we are proud of it.
